A N N U A L   R E P O R T  
OF THE  
M E D I C A L   O F F I C E R   O F   H E A L T H  
FOR THE YEAR 1962.

To the Chairman and Members of the  
Coseley Urban District Council.

Ladies and Gentlemen,

I have the honour to present the Annual Report for the year 1962.

As reported by Dr. Kelly last year the general health of the community remains satisfactory.

The population continues to increase and the end of year estimate of 40,620 is 900 above last year. The number of houses on the rate book has fortunately increased by a larger proportion.

A study of the birth, death and infant mortality rates and the amount of illegitimacy shows no significant change from last year and, as always, leaves room for improvement in the long term.

The total number of infectious diseases was as expected much smaller than that in 1961 which was a measles year and the numbers show an increase again as expected in the early part of 1963.

This however is significant in being the first year in which there has been no notification of either Poliomyelitis or Diphtheria. This however is not a cause for complacency but, I hope, a spur to increase the percentage of young people immunised and vaccinated in an endeavour to eradicate these diseases from the country.

The figures for immunisation show an apparent fall particularly with regard to whooping cough but this is mainly due to the change in the country from starting at 5 - 6 weeks old with single vaccination to the use of the combined "Triple" vaccination at 9 months and following the administration of the now popular oral Poliomyelitis vaccine (6 - 8 months).

There has been a substantial reduction in the incidence of Poliomyelitis in Great Britain since the oral vaccine was introduced for general use early in 1962.

Continued shortage of staff till towards the end of the year again hampered in the work of the health department but as always housing and meat held priority and were not neglected at all. Unfortunately no smoke control area was approved and Coseley remain on the Ministry list of those with no Control Area yet functioning.

In conclusion I wish to thank the Chairman of the Health Committee, Councillor Mrs. V. Turton, and members of the Health Committee; the Health Department staff for their guidance and assistance which they have unfailingly placed at my disposal.

I am,

Your obedient Servant,

A.G. Bailey.

SANITARY CIRCUMSTANCES OF THE AREA

WATER SUPPLY.

Water is supplied to the district by the South Staffordshire Water Works Co. Ltd., and by the County Borough of Wolverhampton.

The quality of the water in all areas has been good and the twelve analyses in 1962 have been satisfactory.

CLOSET ACCOMMODATION.

There are 49 houses in the district not connected to the water carriage system. This is due to the latter not being readily available. In most cases the houses are too low for the sewer.

PUBLIC CLEANSING.

The Health Department is not responsible for this service and the supervision is by the Transport, Cleansing and Stores Committee of the Council.

# SECTION E

## HOUSING

There were 270 Council houses and flats and 216 Private houses and flats erected during the year.

The number of houses and flats constructed since 1945 is 3,112 Council and 2,682 Private.

A N N U A L     R E P O R T

OF THE

CHIEF     PUBLIC     HEALTH     INSPECTOR

FOR     THE     YEAR     1962.

To the Chairman and Members of the  
Coseley Urban District Council.

Mr. Chairman, Ladies and Gentlemen,

It is my duty and privilege to present a report for the year 1962.

During the year your Chief Public Health Inspector, Mr. Parkes, retired after over 30 years service with the Council.

May I quote from the report of the year of his appointment - 1928.

"Closet Accommodation"

"Privies	1974"
"Privy-Middens	204"
"Pail Closets	50"

Today only in the remotest places are there one or two houses not yet connected to the public sewer.

When the overcrowding survey was carried out in 1936, 545 houses were overcrowded while today statutory overcrowding is rare, for the Council's scheme ensures re-housing before a family becomes overcrowded.

Again in the last few years well over a thousand houses have been represented as being unfit.

Here is evidence of the great social progress made by the District and carried out by the Council during Mr. Parkes' term of office as your inspector.

While there is still progress to be made it is sometimes a good thing to look back and see what has been done.

During the year under review steady but unspectacular progress has been maintained. After a period of staff shortage the Department had for the first time a full establishment but this has subsequently proved to be short lived due largely to the unsettling effect of the Minister's proposed Local Government re-organisation.

We have continued to inspect all of the animals killed in the district for food. The coming into effect of the

Slaughterhouse Construction Regulations at the beginning of 1963 will make for further progress.

The remaining slaughterhouse was brought up to the high standard of the Regulations and the Council purchased for re-development the other slaughterhouse which ceased operations at the end of the year.

The work of slum clearance under the Housing Act has continued 8 areas were confirmed by the Ministry and in all 72 houses were represented as unfit.

In atmospheric Pollution too some progress was made. A preliminary survey for a smoke control area was carried out and pamphlets were distributed. Towards the end of the year the Department installed an apparatus for the daily measurement of smoke and sulphur dioxide at Bayer Hall.

May I take this opportunity of thanking the members of the Health Committee and especially Councillor Mrs. Turton their Chairman for the indulgence, help and courtesy extended to me especially during the first few months in my new office. I should also like to thank my colleagues for their help so unstintingly given.

I have the honour to be,

Your obedient servant,

H. R. FRY.

Chief Public Health Inspector.

ATMOSPHERIC     POLLUTION.

During the year 192 observations were made at various premises for the emission of dark smoke.

I would like to thank Mr. Starbuck, Chief Chemist of Messrs. Stewarts & Lloyds and his staff, for their help and interest, in carrying out the monthly tests of the deposit gauges and lead peroxide cylinders.

SUMMARIES     OF     RESULTS.

The tables on the following pages show, in Table 'A' the tons per square mile per month of deposited matter and Table 'B' the estimation of sulphur by lead peroxide method, Mg. of SO<sub>3</sub> per day per 100 square centimetres.
